

## ABSTRACT OF DISCLOSURE

The present invention relates to a liquid crystal composition having a high-speed response property and a liquid crystal display using the same,  
5 more particularly to a liquid crystal composition, wherein the liquid crystal has a high phase transition temperature, large birefringence index and modulus of elasticity, and a wide operable nematic temperature range, so that a high-speed response can be obtained to be useful for many liquid crystal devices including LCDs, and a liquid crystal display using the same.
